BBILLIONAIRE

Business Plan

Smart-contract based USDT / GC staking and referral program on BNB Smart Chain

Website: https://bbillionaire.org
Network: BNB Smart Chain (BSC Mainnet, chain ID 56)
Contract: 0x7C9ef25dD9e20013d49460e062c5D04976ebd70F

1. Overview

Bbillionaire is a decentralized program that runs entirely through a smart contract. Participants deposit USDT (BEP-20) or GC tokens, receive a monthly return on their package, and earn level commissions from their referral network. All rules below are enforced on-chain by the contract and are read from its public parameters.

2. Key Program Parameters

Parameter	Value
Network	BNB Smart Chain (BEP-20)
Supported tokens	USDT (18 decimals) and GC (6 decimals)
Minimum first deposit	100 USDT / 100 GC
Minimum re-investment	300
Maximum per package	100,000
Maximum lifetime per user	100,000
Deposit fee	1% (100 / 10,000 bps)
Monthly ROI	10% of package (1,000 bps)
ROI period (MONTH)	30 days (2,592,000 seconds)
Earning cap (base)	2.5x of package (25,000 bps)
Level income depth	10 levels

3. How It Works

- Connect a Web3 wallet (MetaMask, Trust Wallet, etc.) on BNB Smart Chain.
- Choose a token (USDT or GC) and enter the deposit amount. The first deposit requires a referrer

wallet address.

- Approve the token for the contract: the amount plus the 1% fee (shown by the dApp via getRequiredApproval).
- Confirm the deposit. A package is created and your wallet is registered in the program.
- ROI accrues over time. Use Claim to withdraw the amount available at that moment.
- Re-invest (minimum 300) to create additional packages, up to the lifetime maximum.

4. Monthly Return (ROI)

Each package earns 10% of its amount per 30-day period. Returns accrue continuously and can be claimed from the dashboard (function: claim). Total earnings on a package are limited by its maximum cap (base 2.5x of the package, with the user-specific multiplier available from getMaxCapMultiplierBps).

Package	Monthly ROI (10%)	Base max cap (2.5x)
100	10	250
500	50	1,250
1,000	100	2,500
5,000	500	12,500
10,000	1,000	25,000

Figures are illustrative amounts in the deposited token, before the 1% deposit fee.

5. Referral Level Income

Referrers earn level commissions across 10 levels of their network (function: levelBps). Commission rates by level:

Level	Rate	Level	Rate
1	10%	6	0.5%
2	7%	7	0.5%
3	4%	8	0.5%
4	1%	9	0.5%
5	0.5%	10	0.5%

Total commission across all 10 levels: 25%. Level income is tracked per wallet (pendingLevel / claimedLevel) and counts towards the earning cap.

6. Security and Administration

- Non-custodial: users deposit and claim directly from their own wallet; there is no off-chain account.
- Re-entrancy protection and safe token transfers (SafeERC20) are built into the contract.
- Owner controls: pause / unpause, set fee wallet, block or hold a user, add extra supported tokens, rescue stray tokens.
- Deposit fee of 1% is sent to the configured fee wallet.
- Contract state (balances, packages, claims) is publicly verifiable on BscScan.

7. Dashboard Features

- Wallet connect with automatic switch to BSC.
- USDT / GC token selection with live limits (min, max, remaining lifetime).
- Deposit review, approval and deposit in a guided flow.
- Account summary: total invested, packages, max cap, claimed, claimable now, remaining to earn, direct referrals.
- Package list and referral link sharing.

8. Risk Disclosure

Participation involves risk, including smart-contract risk, token price volatility and the possibility of losing the deposited amount. Returns shown are program parameters, not guarantees. Review the verified contract on BscScan and only participate with funds you can afford to lose. This document is informational and is not financial advice.
