1. Overview

Bbillionaire is an on-chain investment plan that runs entirely as a smart contract on BNB Smart Chain. Participants invest JSAV tokens, earn a fixed monthly return on each investment, and may earn referral (level) income from their direct and indirect network. Every rule below is enforced by the contract; there is no off-chain account, deposit form, or manual payout.

This document describes the plan as implemented by the deployed contract. Figures were read directly from the contract on-chain, and function behaviour is taken from its public interface (ABI). The contract has not been independently audited as part of preparing this document.

2. Plan Parameters

Parameter	Value
Token	JSAV (18 decimals), BNB Smart Chain
Minimum investment	100 JSAV
Maximum per investment	100,000 JSAV
Lifetime limit per address	100,000 JSAV
Entry fee	10% of the invested amount, paid on top of the principal
Monthly return (ROI)	8% of principal per 30-day month
Earnings cap per investment	2x principal (ROI and level income combined)
Claim interval	Once every 30 days per wallet
Referral depth	5 levels
Level income cap	10 JSAV per level per window

3. How an Investment Works

- Choose a whole number of JSAV between 100 and 100,000 and approve the contract to spend the principal plus the 10% fee.
- Submit the investment. The contract takes principal plus fee from the wallet and records a new, separate investment with its own start time.
- Each investment accrues ROI at 8% of its principal per 30 days. ROI is accrued by anyone calling the contract's accrue functions, and credited to the investor's pending income.
- Pending income can be claimed from the wallet, once every 30 days.
- When an investment's total earnings (ROI plus level income) reach 2x its principal, it is capped and stops earning.

Example. A participant investing 100 JSAV pays 110 JSAV (100 principal + 10 fee). The investment earns 8 JSAV per month, up to a total of 200 JSAV, which at ROI alone is reached after 25 months. An investment of 100,000 JSAV pays a 10,000 JSAV fee, earns 8,000 JSAV per month, and is capped at 200,000 JSAV.

4. Referral (Level) Income

A new wallet can register under a referrer. If none is given, it is placed under the contract's root referrer. Referral income is paid across five levels using the rates stored in the contract:

Level	Rate
Level 1 (direct referral)	5.0%
Level 2	3.0%
Level 3	1.0%
Level 4	0.5%
Level 5	0.5%
Total across five levels	10.0%

Level income counts toward each recipient investment's 2x earnings cap, and is limited to 10 JSAV per level per window. Level income is credited by the contract and emitted as LevelIncome events that record

the source, recipient, level and amount, so every payment is publicly traceable.

5. Reward Funding

ROI and level income are paid out of JSAV held by the contract. The contract exposes functions for funding the reward pool and a public view of the contract's JSAV balance. Because payouts can only come from tokens the contract holds, a claim can only be paid to the extent the pool is funded. Participants should check the contract's JSAV balance before relying on any expected return.

6. Governance and Controls

- Owner: a single owner address can set the fee wallet, hold or block individual accounts, and transfer ownership.
- Held or blocked accounts can be restricted from investing and claiming.
- Fee wallet: receives the 10% entry fee.
- Owner, fee wallet and root referrer are currently the same address: 0x76875EC560d6D79C2f13363fBF9b40937372fe2C.

These controls mean participants rely on the owner acting honestly; they are not trustless in that respect.

7. Transparency and Verification

- Every investment, accrual, claim and level payment emits a public event on BNB Smart Chain.
- Participants can read their investments, available ROI, remaining cap and next claim time directly from the contract, independent of the website.
- Before investing, confirm the contract address above matches the one shown at bbillionaire.org, and review it on BscScan.

8. Risk Disclosure

- Returns are not guaranteed. The 8% monthly rate and 2x cap are maximums defined by the contract, not promises of income.
- Payouts depend on the contract holding enough JSAV. If the reward pool is not funded, claims cannot be paid in full.
- JSAV is a crypto-asset and its market price can fall or become illiquid; the plan is denominated in JSAV, not in any currency.
- The 10% entry fee is charged up front and is not refundable by the contract.
- Smart contracts can contain bugs. The owner holds administrative powers, including the ability to hold or block accounts.
- Crypto-asset investments may be restricted or regulated in your jurisdiction. You are responsible for compliance and taxes.
- Only invest an amount you can afford to lose. Never share your seed phrase or private key with anyone.
